

How the Apple Juicing Days Work

- We will be operating on a first come first served basis, which means that you may have to wait for your juice.
- Due to time constraints and numbers, we may not be able to juice all of your apples.
- **We will not be pasteurising juice.**

What to Bring

- Washed and clean apples. We won't juice muddy or rotten apples. This could contaminate yours and other's juice.
- Your own washed containers, bottles, fermentation buckets. We recommend plastic (*milk/fizzy drink bottles*) if you'd like to freeze the juice, or glass if you'd like to pasteurise in a pan of water at home.
- There will be a selection of pamphlets and books, some available to purchase or make donations.

Offers

Apple pulp will be available after each event for composting and/or animal feed please bring buckets.

Volunteer Jobs

- Helping process the apples - weighing the apples, operating the Scatter to chop the apples up ready for the press, operating the Hydropress juicer (training provided, contact us at volunteers@cwmarian.org.uk) and filling bottles for customers
- Washing the juicing equipment,
- Taking payments from customers,
- Keeping the volunteer team juicing, powered by copious cups of tea and quantities of cake!
- Stewards to help manage traffic and maintain social distancing.

Covid Considerations

Please follow current guidance and be patient whilst we maintain mitigating measures.

The CARE team will make every effort to ensure that appropriate government guidelines are followed in the delivery of these events. We recommend waiting three days before consuming the juice to ensure the product is covid free, as both fruit and equipment may be handled by other people.
